GERMAN COMPETENCE

senator® is a leading supplier of stationery products. We develop products and market solutions which have acquired a prominent market position around the world due to their versatile application possibilities. Our roots lie in Germany and, with 300 employees, we continue to spread our promise of value across the world. German competence is considered synonymous with first-class products and high sustainability standards. This is the basis for our growth, which we continually promote through great product ranges, strong brands, expert employees, advanced development and manufacturing work and targeted development of new, trend-setting markets.

Leading since 1920.

Rely on our vast experience which spans over almost one hundred years of corporate history.

Anyone in Germany using a German-made ballpoint pen is very likely to be using a senator[®] product. We have been developing and refining writing utensils for over 90 years. Our inventiveness and cooperative collaboration with our customers has led to senator[®] becoming a byword for ballpoint pens today.

In keeping with the tradition of our founder, Friedrich Merz, and bound to the wishes of our dealers, we develop ideas which assert themselves on the market due to their diversity. And we are very successful in doing so: every third ballpoint pen produced in Germany today is a senator[®] product. We are even number one across Europe and number 3 worldwide.

Production hall 1928

Continually evolving tasks.

‘Excellence’ means customer satisfaction

The performance of senator® can be felt throughout the entire supply chain: you can find solutions all under one roof - for design, construction, assembly, production or logistics. At the same time, we follow clearly defined guidelines, both internal and external, and ensure high quality in all aspects as well as compliance with all predefined processes. This know-how guarantees consistent senator® quality for all products.

We like to be in control, as this is the best way to keep decision-making routes short. You and your customers benefit from this through innovative and well-engineered products on a global market level - in the shortest possible time with the best price-performance ratio.
